

Under Label NFC Tag

A how-to guide for tagging traditional rope labels and tucked away labels with NFC.

Where to apply

Place the tag under rope labels, on harness and other labels that tuck away into pockets or are protected by a cover, or on small diameter ropes.

How to apply

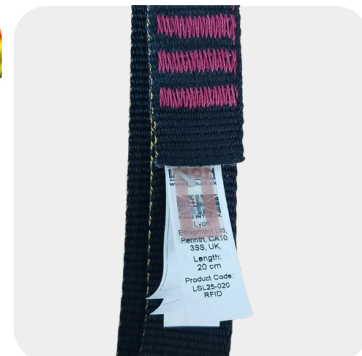

- Ensure the surface where you will place the tag is clean and dry
- Peel and stick - the tag is self-adhesive
- Tuck into a harness label pocket, or inside energy absorber protective pouch
- This tag can also be applied lengthways to prusiks and accessory cord with the addition of adhesive-lined heat shrink to protect the tag

✓ On harness ID cards

✓ Under traditional rope labels

✗ Unprotected and exposed

- Do**
- Use in a protected or enclosed area
 - Tuck into label pockets where possible
 - Cover with heat shrink or tape to protect the tag on ropes

- Don't**
- Apply directly onto metal (these tags don't read on metal)
 - Leave the tag exposed without protection as it may peel off

This tag works well on equipment like:

Petzl Astro Bod, ASAP'Sorber, Grillon rope, Jane range; Singing Rock Body II; under traditional rope labels, small diameter rope and accessory cord
