

## Quick Start Guide – USB NFC Reader

This NFC reader works in Keyboard Emulation mode – it types out the Unique Identifier (UID) of a scanned NFC tag wherever your cursor is active.

### Getting Started:

1. Plug the NFC Reader into your device
2. Open the Scannable app in your browser
3. Click into any text field (eg Search bar)
4. Scan your NFC tag

💡 Tip: The antenna's 'sweet spot' on the reader is the bottom-left corner.

### Troubleshooting:

Nothing happens? Try:

- Refreshing the page
- Replugging the reader
- Trying a different USB port
